
How to get Europe's electric vehicle industry into orbit?

2024/05/22 09:13 στην κατηγορία INTERNATIONAL

Tommaso Pardi, a leading researcher from the renowned French National Centre for Scientific Research (CNRS), joined ACEA's Sigrid de Vries for a no-holds-barred discussion on the future of Europe's electric vehicle industry.

Mr Pardi elaborates on what action Europe's leaders must take today to safeguard the future of this strategic industry, touching on issues such as affordability, battery value chains, and the importance of a global level playing field.

Find out more

European auto makers want to build a robust European zero-emission mobility ecosystem in Europe that enables manufacturers to retain competitiveness and thrive while serving the need for affordable zero-emission models produced profitably in Europe.

Our industry is undergoing a significant transformation towards zero-emission transport, and collaboration with all stakeholders is key to achieving shared societal goals. You can learn more about what Europe can do to shore up its electric vehicle manufacturing industry in [ACEA's #FutureDriven Manifesto](#).
