Teleste has signed a frame agreement with Siemens Mobility GmbH. Under the agreement, Teleste will deliver cutting-edge on-board systems and solutions to enhance the operational efficiency and delivery of passenger information on Siemens Mobility's trains.

The collaboration encompasses both software and hardware for on-board passenger information and CCTV systems, ensuring a seamless travel experience for passengers onboard. Further contributing to the sustainable future of rail transport worldwide, this partnership also aims to address the growing demand for smarter, greener, and more reliable mobility solutions worldwide.

"We are proud to partner with Siemens Mobility, a global leader in the rolling stock industry," said Valerian Sand, Head of Teleste's Public Safety and Mobility business. "This frame agreement underscores our commitment to delivering cutting-edge, innovative solutions that not only improve the operational efficiency of rail systems but also enhance the overall passenger experience."

With a shared focus on advancing smart mobility, the partnership will help address key industry challenges such as securing the constant availability of travel information and providing passengers with reliable connectivity during their travel. Teleste's on-board systems are designed with scalability and flexibility in mind, ensuring that they can meet the diverse needs of Siemens Mobility's global portfolio.
